When enhancing someone's smile, I am treating more than just the mouth; I'm treating the person, too **ANTI-AGING ADVICE** Flossing will help you keep your teeth **ALTERNATIVE OCCUPATION** Artist or writer **HOBBIES** Continuing education classes, exercise, travel and hiking **FRAMED PHOTOS ON YOUR DESK** My three children **I'M NEVER WITHOUT** Love and support **I WOULD LOVE TO OWN** A house on the ocean

bright ideas

A dazzling, "ear-to-ear" smile has the potential to enhance one's appearance. So says Dr. Elahe P. Wissinger, who gives her many loyal patients multiple reasons to flash their aesthetic, pearly whites. "It's moving to see how cosmetic dentistry can affect people, impacting both physical appearance and the self-image one holds of him or herself."

A former peer counselor, with a bachelor's degree in psychology, Dr. Wissinger notes that she always focuses on treating the whole patient, not just the mouth. Doing so, she says, relays her commitment to "the betterment of each patient" and reflects her steadfast devotion to providing the all-encompassing care she feels her patients deserve. "I spend a great deal of time getting to know each patient as a person first," she explains. "By really listening to what they have to say, I can formulate a treatment plan that surpasses their expectations." Dr. Wissinger's Tucson, Arizona, practice serves as a showcase for her adeptness at everything from porcelain veneers and Invisalign™ to in-office whitening treatments, while also providing a variety of options for prevention and care, including screenings for oral cancer.

Dr. Wissinger maintains a gentle approach to dentistry and does everything necessary to make a visit with her as pleasant as possible. Her reception area amenities include a fountain and fireplace, and treatment rooms feature specially built sports-back chairs, down pillows and blankets, satellite TV and DVD players, as well as nitrous oxide for nervous patients. When it comes to cosmetic enhancement, Dr. Wissinger advises those looking to improve their appearance to consider how smile rejuvenation can help them achieve their goals. "So much is centered around the smile," she explains.

UP CLOSE AND PERSONAL

Dr. Wissinger produces predictably beautiful outcomes for even the most complex procedures using a special microscope that increases magnification of the tooth and gum area. "The microscope helps me perform restorations and veneer procedures with a high degree of accuracy," says Dr. Wissinger. "It really lets me see inside the tooth and create exact margins, thereby improving the quality of the work." Observing how difficult it can be for patients to carve out time from their busy lives, Dr. Wissinger equips her practice with a host of **TIME-SAVING TECHNIQUES AND INNOVATIONS**, including CEREC® equipment. An acronym for Chairside Economical Restoration of Esthetic Ceramics, CEREC technology lets Dr. Wissinger **REPAIR TEETH IN A SINGLE OFFICE VISIT**. The technology eliminates the need for temporary restorations, enabling patients to walk out of her practice with the smiles they've always dreamed of. "Designing smiles lets me express my creativity," Dr. Wissinger says. "It's not only my job; it's a passion I find very rewarding."
